Watering Instructions:

Water Quality:

Water must be from the outside spigots, bypassing the water softener (as this adds salt and may add other chemicals to the water); it must be pure and free of any contaminants. No recycled water should be used to water the plants, or be applied to the plant beds.

How to Water the Plants:

Use a gentle spray, rain, or soaker setting to prevent erosion of soil and mulch. Do not use a harsh stream or strong spray. Use a watch to time yourself if necessary.

Trees Water each Tree for Five (5) Minutes per Tree at Tree Trunk and Base, **NOT** the foliage.

Medium-Large Shrubs Water each Shrub for Three (3) Minutes per Shrub, try to water the base of the plant as opposed to the foliage if possible.

Small Shrubs & Evergreens Water each for Two (2) Minutes per plant
Roses: Avoid watering foliage, water the base of the plant only

Perennials Water each for One (1) Minute per plant

Watering Immediately Following Installation:

1st & 2nd Week: Water once a day every day for the first two weeks. Watering should be done either before 9:00 am or after 6:00 pm.

3rd-4th Week: Water once a day every third day. Watering again should be done either before 9:00 am or after 6:00 pm.

5th Week: Water once a week. Watering again should be done either before 9:00 am or after 6:00 pm.

Note: If there is a heavy rain on a watering day, then watering is not needed.

If you have any questions regarding watering, or do not understand these instructions, please contact us at (440) 729-1374. You are responsible for watering your plants; failure to water the plants as instructed, especially during hot summer months, can cause the plants to become weak or die.
